AI for Bharat Hackathon

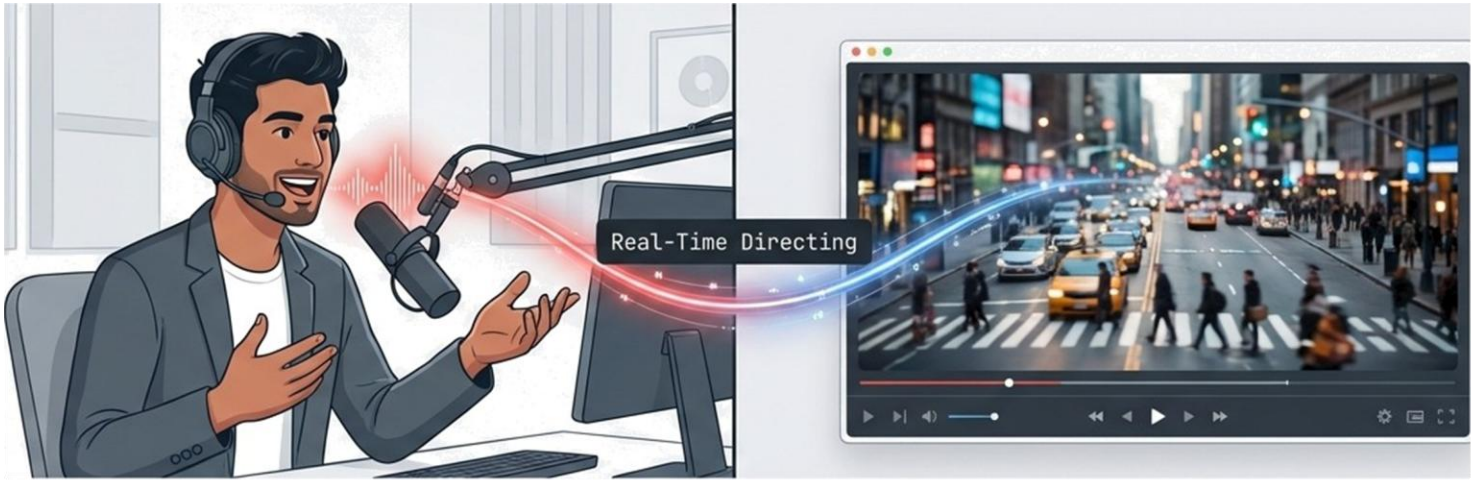
Powered by aws

Team Name : Luminare

Team Leader Name : N. Chaitanya Avinash

Problem Statement : AI for Media, Content and Digital Experiences

Brief about the Idea:



The Big Idea: LiveDirector AI is a real-time intelligent agent that "directs" your video as you record it.

The Mechanism: By listening to speech, it automatically inserts relevant stock footage, charts, and visualizations instantly.

Powered by Amazon Bedrock

Powered by Amazon Transcribe

The Problem vs. The Solution

Eliminating the 'Editing Tax' for Indian Creators.

The Old Way

Post-Production Hell

- 2-4 Hours editing time per 10m video
- High Skill Barrier (Premiere/FCP)
- Requires Expensive PC Hardware

The LiveDirector Way

Real-Time Production

- Zero Wait Time (Edits during
- recording) Language Agnostic
- (Hindi/Tamil Support) Works on Basic Laptops

*Unique Selling Proposition: Context-aware asset injection that understands local Indian languages but fetches global quality media.

List of features offered by the solution

Live B-Roll Injection

Automatically fetches and plays video clips matching spoken keywords in real-time.

Smart Context Understanding

Distinguishes semantics. Example: Understands 'Apple' (fruit) vs 'Apple' (tech company) based on sentence context.

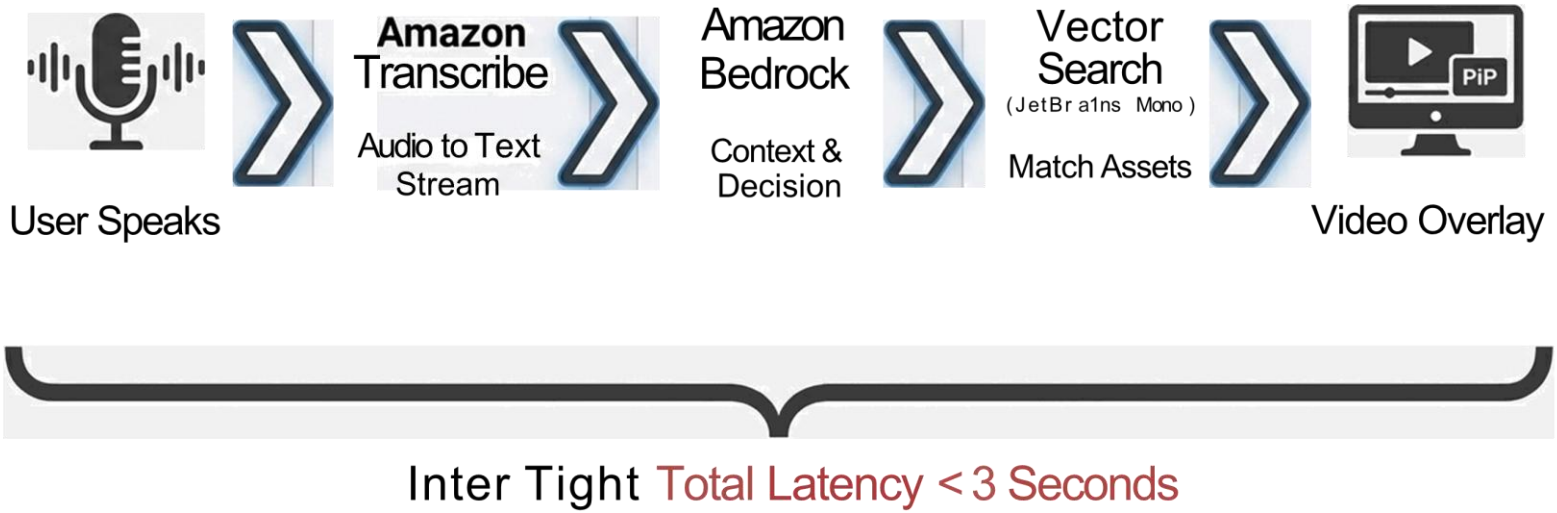
Multilingual Support

Speak in local languages (Hindi, Tamil); AI understands intent and fetches relevant global media assets.

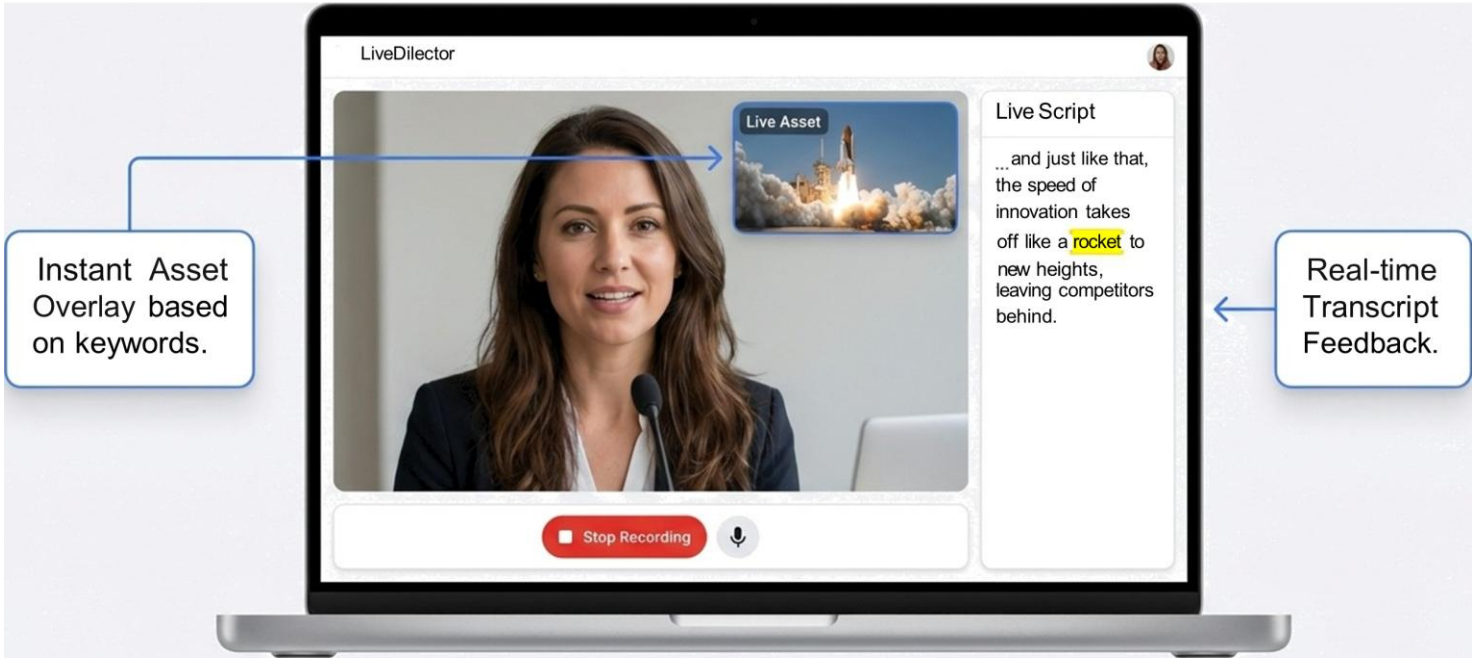
Privacy-First Architecture

Video feed never leaves the device. Only audio text is analyzed in the cloud.

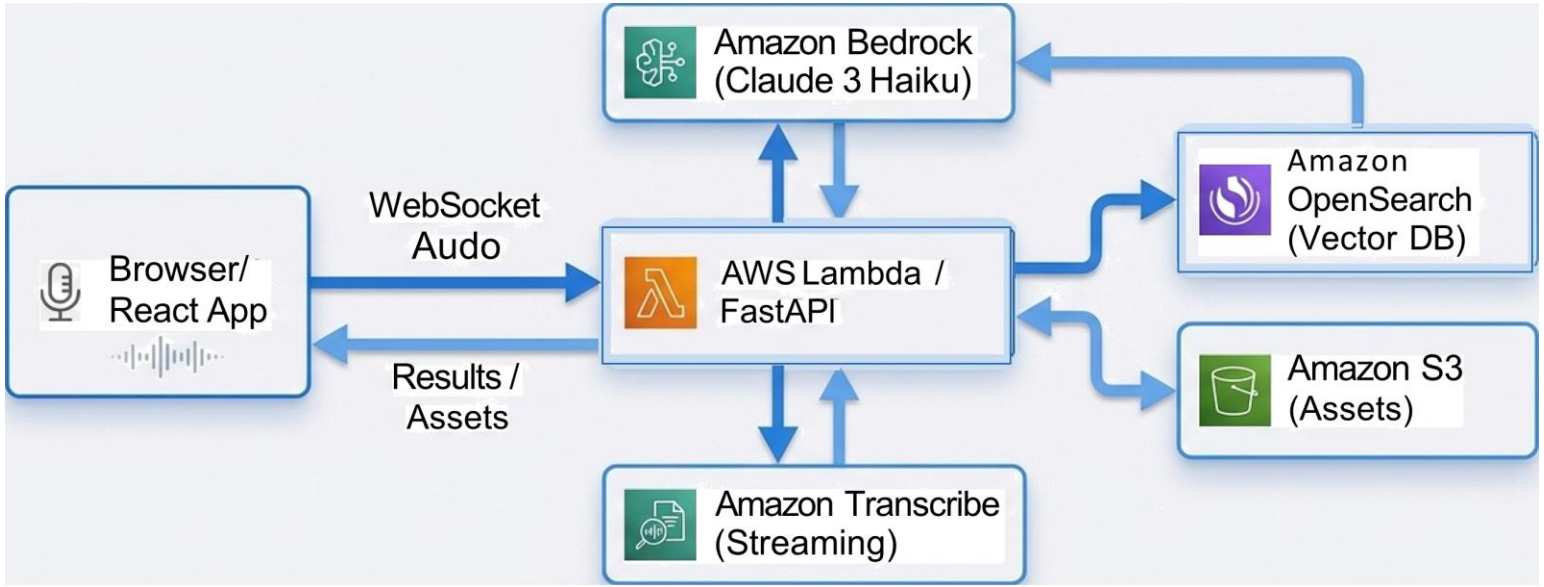
Process flow diagram



The User Experience



Architecture diagram of the proposed solution:



Highly scalable architecture designed for zero-idle cost.

Technologies to be used in the solution:

The Brain	The Ears	The Memory	The Glue	The Face
Amazon Bedrock (Claude 3 Haiku)	Amazon Transcribe	Amazon S3 & OpenSearch	FastAPI & WebSockets	React.js
Chosen for high reasoning speed and low latency	Best-in-class accuracy for Indian accents and languages	Scalable object storage and vector retrieval	Real-time bi-directional communication	Responsive frontend interface

Estimated implementation cost:

$0

Development Cost (AWS Free Tier)

< $2.00

Total Cost per Hour of Finished Content

Running Costs:

- Amazon Bedrock (Haiku): -$0.25 / hour video
- Amazon Transcribe: -$1.44 / hour audio

Extremely viable for the Creator Economy and EdTech platforms in Tier 2/3 cities.

*Estimated costs, subject to vary
